Build Real LLMOps and Human-in-the-Loop Portfolio Experience

AI is changing hiring. CITL helps students uptrain with supervised, real projects so confidence and employability grow together.

Why This Matters Right Now

- ? Employers increasingly ask for applied AI workflow competency, not just theory.
- ? New AI-adjacent job titles are growing across IT support, operations, training, and analytics.
- ? BLS occupational outlook trends continue to show strong demand in technology roles where AI-enabled workflows are becoming standard.

What You Can Build in CITL

- ? Technical walkthrough manuals with numbered screenshot evidence.
- ? Human-in-the-loop QA pipelines for LLM output validation and correction.
- ? Tutorial videos and knowledge assets for real campus operations.
- ? Portfolio-ready project artifacts with reproducible process quality.

Portfolio Outcomes

- ? A complete LLMOps workflow from prompt design to verified output.
- ? A polished technical guide with troubleshooting and evidence mapping.
- ? A short tutorial demonstrating communication and execution.

Apply to CITL Workstudy: close the formal AI training gap with supervised real-project practice. Students build new content by default; edits to shared originals require supervisor approval.

Numbered Screenshot Placeholders (Required)

Screenshot #1 - Program landing page and application steps

Insert image for current campaign cycle. Keep numbering stable in final export.

Screenshot #2 - Example project board and task flow

Insert image for current campaign cycle. Keep numbering stable in final export.

Screenshot #3 - Before/after technical walkthrough sample

Insert image for current campaign cycle. Keep numbering stable in final export.
